Description	Data type
Unique household identifier (primary key used to join the five source datasets)	Text (ID)
Province of the household, with spelling variants mapped to the nine official names	Text
Geography type of the household's area	Whole number
Survey weight: how many households in the population this sampled household represents	Decimal
Whether the household's water is considered safe (coded)	Whole number
Whether the household's water is considered safe (labelled)	Text
Main toilet / sanitation type, with impossible codes set to missing	Whole number
Whether the household has electricity (coded)	Whole number
Whether the household has electricity (labelled)	Text
How often the household experiences load-shedding (coded)	Whole number
Number of people in the household; records with 0 people were removed	Whole number
Monthly household income in rand; placeholder values (e.g. 9,999,999) set to missing	Decimal
Frequency of adult hunger (coded)	Whole number
Household's main source of income	Whole number
Number of vehicles, with text entries set to missing	Whole number
Household owns a fridge	Whole number
Household owns a TV	Whole number
Household owns a computer	Whole number
Household owns a washing machine	Whole number
Household owns a vehicle	Whole number
Household owns a geyser	Whole number
Household owns a solar panel	Whole number
Main wall material	Whole number
Condition of the walls	Whole number
Main roof material, with impossible codes set to missing	Whole number
Condition of the roof	Whole number
Condition of the floor	Whole number

Tenure type (how the household occupies the dwelling)	Whole number
RDP / government housing status	Whole number
Housing subsidy status	Whole number
Count of basic services present: safe water, electricity, and a recorded toilet type	Whole number
Number of the 7 assets the household owns	Whole number
Log-transformed income	Decimal
Household size grouped into bands	Text
Load-shedding frequency kept as an ordered factor for modelling	Whole number
Adult hunger frequency kept as an ordered factor	Whole number
Whether the household is in the bottom 25% of income (the 'Low' group)	True / False
Low-income household that also has a service access score of 1 or less	True / False
Number of wall, roof and floor condition codes equal to 1	Whole number

Coding / values
18-digit number; keep as text in BI tools
Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, North West, Northern Cape, Western Cape
1, 2, 3 (meanings not documented)
Positive decimal (about 192 to 5,050)
1 = Considered safe, 2 = Not considered safe, 9 = Don't know
Considered safe / Not considered safe / Don't know
1 to 12 (meanings not documented)
1 = Has access, 2 = No access, 9 = Don't know
Has access / No access / Don't know
1 to 5, 9 (meanings not documented)
1 to 25
0 to 1,460,000
1 to 6, 9 (meanings not documented)
1 to 8, 99 (meanings not documented)
1 to 8, 12, 16, 88, 99; 88 and 99 look like special non-response codes
1 = owns (confirmed through AssetIndex); 2 and 9 not documented
1 = owns; 2 and 9 not documented
1 = owns; 2 and 9 not documented
1 = owns; 2 and 9 not documented
1 = owns; 2 and 9 not documented
1 = owns; 2 and 9 not documented
1 = owns; 2 and 9 not documented
1 to 12, 99 (meanings not documented)
1 to 5 (meanings not documented). 1 goes with the highest Low-income share, so it is probably the poorest condition
1 to 12 (meanings not documented)
1 to 5 (same pattern as wall condition)
1 to 5 (same pattern as wall condition)

1 to 8 (meanings not documented)
1, 2, 3 (meanings not documented)
1, 2, 3 (meanings not documented)
0 to 3: +1 if WaterSafeCode = 1, +1 if ElectricityAccessCode = 1, +1 if MainToiletCode_clean is 1 to 12
0 to 7
log(1 + income_clean)
Small (1-2), Medium (3-5), Large (6+)
1 to 5, 9 (meanings not documented)
1 to 6, 9 (meanings not documented)
TRUE if income_clean <= R2,470 (25th percentile); FALSE otherwise; blank if income missing
TRUE / FALSE; blank where the score or income is missing
0 to 3

Missing (of 20,925)	Basis	Notes
0	Verified against data	Dropped before modelling
0	Verified against data	Predictor
0	No codebook available	Predictor. Shown as a raw code only
0	Verified against data	Used for all weighted percentages in Power BI. Removed before modelling
0	Verified against data	Code version of WaterSafe_label
0	Verified against data	Predictor
2	No codebook available	Predictor. Codes 3, 9, 10 and 12 have fewer than 70 households each
50	Verified against data	Code version of ElectricityAccess_label
50	Verified against data	Predictor
0	No codebook available	Duplicate of Loadshedding_ord
10	Verified against data	Predictor
450	From Milestone 2/3 notes	Median R5,030. Not used as a predictor, to avoid predicting poverty from the measure that defines it
65	No codebook available	Duplicate of AdultHunger_ord
65	No codebook available	Predictor. Overlaps closely with income, so read its strength with care
22	No codebook available	Predictor
0	Verified against data	One of 7 asset flags behind AssetIndex
0	Verified against data	One of 7 asset flags behind AssetIndex
0	Verified against data	One of 7 asset flags behind AssetIndex
0	Verified against data	One of 7 asset flags behind AssetIndex
0	Verified against data	One of 7 asset flags behind AssetIndex
0	Verified against data	One of 7 asset flags behind AssetIndex
0	Verified against data	One of 7 asset flags behind AssetIndex
55	No codebook available	Predictor
0	No codebook available	Feeds DwellingConditionsScore
13	No codebook available	Predictor
1	No codebook available	Feeds DwellingConditionsScore
1	No codebook available	Feeds DwellingConditionsScore

1	No codebook available	Predictor
1	No codebook available	Predictor
4082	No codebook available	Predictor. Missing for about 20% of households
50	Verified against data	Rule reconstructed from the data (matches every row). The toilet part counts any recorded toilet type, so it does not reflect toilet quality. Excluded from modelling because it hides which service matters
0	Verified against data	Predictor. Count of asset flags equal to 1
450	Verified against data	Not used as a predictor
10	Verified against data	Derived from HouseholdSize_clean. Used for Power BI slicers
0	No codebook available	Predictor
65	No codebook available	Predictor
450	Verified against data	Basis of the Target (Low / NotLow) in train_data and test_data
24	Verified against data	Only 83 households are TRUE, so not used as a headline measure
1	Verified against data	Predictor. Higher score = more components in the worst-looking condition group
